

1. An apparatus for dispensing seam tape to an edge of membrane roofing comprising:
  - a frame;
  - a first roller mounted at a front lower portion of said frame
  - 5 adapted to press seam tape against an edge of membrane roof;
  - a second roller mounted in a rear lower portion of said frame adapted to press seam tape against an edge of membrane roofing;
  - a roll of seam tape supported on said frame above said first and second rollers;
  - 10 a tensioning plate pressing against said roll inhibiting the rotation of said roll.

2. The apparatus claimed in claim 1 further comprising a guide bar slidably mounted to said frame extending forwardly from said frame.

3. The apparatus for dispensing seam tape claimed in claim 1 wherein said tensioning plate comprises a plate pivotally mounted to a rear portion of said frame and spring biased against said roll.
